Incisive article by Dr. Joel Hirshorn first published on August 23, 2021

\*\*\*

*When two great minds come to similar conclusions about the current global push to vaccinate everyone with the COVID experimental vaccines, we should pay close attention. Both highly experienced scientists have a totally negative view of the vaccination effort. Worse than being ineffective, they point to negative health outcomes for the global population. These two truth-telling acclaimed medical researchers make Fauci look as inept, deceitful and dangerous as he is.*

The point made in this article is not only has Fauci pushed the wrong potentially disastrous pandemic solution, he has blocked the right one.

Much of what the two virologists say is very technical in nature. This article simplifies their controversial messages without losing their essential meanings. The public needs to understand their warnings that refute all the propaganda pushing vaccines from government and public health agencies as well as big media.

Warning: Keep reading and you may become depressed.

\*

Dr. Luc Montagnier

First considered is the [thinking](#) of Dr. Luc Montagnier, a French virologist and recipient of the 2008 Nobel Prize in Medicine for his discovery of the human immunodeficiency virus (HIV). He has a doctorate in medicine. But there is a lot more to conclude he is a great expert: He has received more than 20 major awards, including the French National Order of Merit and the Légion d'honneur. He is a recipient of the Lasker Award, the Scheele Award, the Louis-Jeantet Prize for medicine, the Gairdner Award, the Golden Plate Award of the American Academy of Achievement, King Faisal International Prize (known as the Arab Nobel Prize),

and the Prince of Asturias Award.

He has worked hard to expose the dangers of the COVID-19 vaccines, still experimental but sadly may soon be fully approved. The vaccines don't stop the virus, argues the prominent virologist, they do the opposite — they “feed the virus,” and facilitate its development into stronger and more transmittable variants. These new virus variants will be more resistant to vaccination and may cause more health implications than their “original” versions.

Montagnier refers to the mass vaccine program as an “unacceptable mistake” and are a “scientific error as well as a medical error.” His assertion is that “The history books will show that...it is the vaccination that is creating the variants.” In other words: “There are antibodies, created by the vaccine,” forcing the virus to “find another solution” or die. “This is where the variants are created. It is the variants that “are a production and result from the vaccination.” Stop and think about these thoughts. Have you heard a better explanation of variant creation? I doubt it.

He is talking about the mutation and strengthening of the virus from a phenomenon known as Antibody Dependent Enhancement (ADE). ADE is a mechanism that increases the ability of a virus to enter cells and cause a worsening of the disease.

Data from around the world confirms ADE occurs in SARS-CoV-2, which causes COVID-19, says Montagnier. “You see it in each country, it's the same: the curve of vaccination is followed by the curve of deaths.” Sounds like what we are now hearing more about, namely escalating breakthrough infections that kill some people. And this spiral into disaster may have no end.

In a November 2020 documentary he emphasized harmful and irrational mask mandates as well as lockdowns, quarantines, abuses of government overreach, and supported use of effective COVID treatments such as hydroxychloroquine. The film was banned by YouTube and most other mainstream outlets. At that time Fauci had succeeded in blocking wide use of the cheap generic based treatments for COVID and pursued the wait for the vaccine strategy.

Montagnier has been a vocal critic of the mass vaccination campaign. In a letter to the President and Judges of the Supreme Court of the State of Israel, which unrolled the world's speediest and the most massive vaccination campaign, Montagnier argued for its suspension. He said: “I would like to summarize the potential dangers of these vaccines in a mass vaccination policy.” Here they are:

*1. Short-term side effects: these are not the normal local reactions found for any vaccination, but serious reactions involve the life of the recipient such as anaphylactic shock linked to a component of the vaccine mixture, or severe allergies or an autoimmune reaction up to cell aplasia. In this group we should include a number of lethal blood problems involving clots and loss of platelets that cause strokes, brain bleeds and other impacts.*

*Lack of vaccine protection:*

*2.1 In induced antibodies do not neutralize a viral infection, but on the contrary facilitate it depending on the recipient. The latter may have already been exposed to the virus asymptotically. Naturally induced antibodies may compete with the*

*antibodies induced by the vaccine.*

*2.2 The production of antibodies induced by vaccination in a population highly exposed to the virus will lead to the selection of variants resistant to these antibodies. These variants can be more virulent or more transmissible. This is what we are seeing now. An endless virus-vaccine race that will always turn to the advantage for the virus.*

*Long-term effects: Contrary to the claims of the manufacturers of messenger RNA vaccines, there is a risk of integration of viral RNA into the human genome. Our cells have the ability to reverse transcriptase from RNA into DNA. Although this is a rare event, its passage through the DNA of germ cells and its transmission to future generations cannot be excluded.*

*His bottom line: "Faced with an unpredictable future, it is better to abstain." But most people will find it extremely difficult to resist all the coercion and vaccine mandates.*

Back in April 2020, before all the talk of variants and before the rollout of the experimental vaccines, Montagnier urged people to refuse vaccines against COVID-19 when they become available. His main point should always be remembered: "instead of preventing the infection, they [would] accelerate infection." Today, the newly occurring variants of SARS-CoV-2 that affect vaccinated people prove his thesis. With his scientific thinking, mass vaccination may cause a new, more deadly wave of pandemic infection.

As to the much talked about and hope for herd immunity, he has said: "the vaccines Pfizer, Moderna, Astra Zeneca do not prevent the transmission of the virus person-to-person and the vaccinated are just as transmissible as the unvaccinated. Therefore the hope of a 'collective immunity' by an increase in the number of vaccinated is totally futile."

On the positive side, he advocated this: "The early treatment of infection with ivermectin and bacterial antibiotic because there is a bacterial cofactor that amplifies the effects of the virus. "

Dr. Vanden Bossche

The stark views of Montagnier have been shared by the esteemed Belgium virologist Dr. Vanden Bossche. He too has considerable credentials that make his views worth consideration. He has PhD degree in Virology from the University of Hohenheim, Germany. He held faculty appointments at universities in Belgium and Germany. He was at the German Center for Infection Research in Cologne as Head of the Vaccine Development Office. He has been in the private sector at several vaccine companies (GSK Biologicals, Novartis Vaccines, Solvay Biologicals) where he worked on vaccine R&D as well as vaccine development. He also worked with the Global Alliance for Vaccines and Immunization (GAVI) in Geneva as Senior Ebola Program Manager.

His views have been analyzed in a recent [article](#). He too has loudly called for a halt to mass-vaccination programs. He believes that if the jabs are not halted, they could lead to the evolution of stronger and stronger variants of the virus until a "supervirus" takes hold and wipes out huge numbers of people.

This is his bold view:

*"Given the huge amount of immune escape that will be provoked by mass vaccination*

*campaigns and flanking containment measures, it is difficult to imagine how human interventions would not cause the COVID-19 pandemic to turn into an incredible disaster for global and individual health."*

Here is an essential element of his thinking. Pretty much everything being done in the pandemic doesn't guarantee elimination of the virus. What is happening is selective viral 'immune escape' where viruses continue to be shed from those who are infected [both vaccinated and nonvaccinated] because neutralizing antibodies fail to prevent replication and elimination of the virus.

The evolutionary selection pressure on the virus through 'immune escape,' creates ever more virulent strains of the virus that have a competitive advantage over other variants and will increasingly have the potential to break through the antibody defenses. Defenses provided by the vaccine induced immune system. This is 'vaccine resistance.' What happens is that vaccine makers keep trying to outsmart variants, but fail. So, they keep pushing boosters and yearly vaccine shots. This is the more is better approach. This is aided by suppression of many negative facts about the vaccines by big media.

A frightening forecast by Bossche is that the worst of the pandemic is still to come. Hard to believe considering all the bad news propaganda about cases, hospitalizations and deaths. But he thinks we are now experiencing the calm before the ultimate storm. Imagine a new wave of infection far worse than anything we've seen so far is how Bossche thinks.

How does this happen? There will be more mutants or variants to which the adaptive immune system from vaccine shots provides little resistance. At the same time there will be decreased innate or natural immune effectiveness. Unless people take a number of steps to boost their natural immunity.

Bossche consistently points to a lack of evidence that the existing global, mass vaccination program that has been mounted while there is still significant infection around, is unprecedented and there is no scientific evidence that this will work. This is why he is largely ignored.

He stresses that historic vaccination programs have always emphasized the importance of vaccinating populations prophylactically in the absence of infection pressure.

He also argues that if different types of vaccine were used that provided sterilizing immunity i.e., that prevented immune escape and killed all viruses in those vaccinated, the situation would be entirely different. Most people do not understand that the current experimental vaccines do not actually kill the virus; and that both the vaccinated and nonvaccinated shed the virus. These vaccines do not stop viral transmission. And all the contagion control measures simply do not work effectively enough to stop wide spread of the virus in its various forms.

Here is his big picture view: "There is only one single thing at stake right now and that is the survival of our human race, frankly speaking."

But there are more strong words recently [said](#) by Bossche to pay attention to:

"every person out there who is 'partially' or 'fully' vaccinated is a walking disease incubation system that puts everyone else at risk of contracting a deadly, vaccine-

caused 'variant' that could kill them. The 'vaccinated' are walking murderers spreading disease to others. Getting injected for the Fauci Flu is not only foolish; it is also a form of murder in that unvaccinated people are now at risk of contracting the deadly diseases being manufactured inside the bodies of the vaccinated. If Trump had never introduced the vaccine in the first place, the pandemic would have long ago fizzled out. Since his vaccines continue to be pushed ... however, the 'Delta' variant is spreading like wildfire, soon to be followed by other 'variants' as we enter the fall season."

This too is a very strong view. The "mass vaccination program is...unable to generate herd immunity." If true, there is little hope of seeing the COVID pandemic ending.

What is the solution? Bossche has identified the needed alternative to the current massive vaccine effort. It is this; "This first critical step can only be achieved by calling an immediate halt to the mass vaccination program and replacing it by widespread use of antiviral chemoprophylactics while dedicating massive public health resources to scaling early multidrug treatments of Covid-19 disease." This is referring to the early home/outpatient treatment protocols based on cheap, safe and fully approved generics like ivermectin and hydroxychloroquine; these also work as preventatives. [Pandemic Blunder](#) provides much data and advice on using this treatment approach. So, both virologists support use of what Fauci has blocked.

These action recommendations were also made by Bossche "Provide - at no cost - early multidrug treatment to all patients in need. Roll out campaigns to promote healthy diets and lifestyle." In other words, people need to take actions to boost their natural immunity, this should include vitamins and supplements, including this cocktail: vitamin C, vitamin D, zinc and quercetin.

## Conclusions

Take a moment to consider that Patrick Wood on the Bannon show on August 21 concluded that all the available data from the US and Europe shows some 100,000 people have died from the COVID experimental vaccines. I agree with that assessment. And by the time you read this FDA may have given full approval to the Pfizer vaccine.

After considering what these two experts have said it is appropriate to criticize what current government officials say, namely blame the unvaccinated for the surges in COVID cases, hospitalizations and deaths. The major alternative to this thinking is that it is the vaccinated people who are creating pandemic problems, including the variants. The strong conclusion is that the current vaccines are ineffective, nonprotective and dangerous.

What is needed is an entirely new approach to COVID vaccines. Perhaps there are companies working on this. This would threaten the trillion-dollar business of the current vaccine makers.

If the people, agencies and institutions with all the power listening to these two very smart people they would devote all their energies to using alternatives to the current vaccines. We have them. Notably, the treatment protocols that so many great doctors have created and used to help their patients.

Many other physicians and medical researchers have called for a halt to the current vaccine bonanza for big drug companies. In the meantime, on a daily basis for all those willing to

look at the facts, it is clearer and clearer that the experimental vaccines are not effective. It is insanity to keep doing or expanding what is not working. That is the insane world we are now experiencing even as more and more people die from breakthrough infections, blood problems and other bad vaccine health impacts.

Perhaps the ugly truth about the vaccines will be widely revealed only when there are massive, widespread deaths despite all the shots and jabs. That will be too late to change pandemic management from money-driven stupidity to life-saving, medically moral actions.
