The UK Medicine Regulator has responded to a Freedom of Information request demanding to know how many deaths have occurred in the past 20 years due to all vaccines, and their response has revealed that there have been four times as many deaths in just eight months due to the Covid-19 injections.

The [request](#) was made via email to the Medicine and Healthcare product Regulatory Agency (MHRA) on the 6th August 2021 in which a Mr Anderson asked the MHRA the following questions –

- How many Deaths have there been from all Covid-19 vaccines?
- Are there any other reporting AI system monitoring systems like the Yellow Card scheme?
- Are Covid-19 Vaccines still in trials?
- How many deaths has there been in last 20 years by previous Vaccines without Covid-19 Vaccines?
- What happens if a there is a new vaccine or new drug? What process and monitoring do they go through?
- What cut off point will the MHRA say a vaccine or drug is unsafe for humans?

The MHRA of course [responded](#) with the usual “we do not hold this information” as seen time and time again from Government departments, especially Public Health England who claim they do not hold the information for the number of people to have died within 28 days of having a Covid-19 vaccine when [Public Health Scotland have been perfectly capable of publishing the figures.](#)

However, [they did confirm](#) that they are using other epidemiological studies, anonymised GP-based electronic healthcare records and international experience to proactively monitor safety alongside the spontaneous reports received via the Yellow Card scheme. The [MHRA also confirmed](#) that the current Covid-19 vaccines on offer in the United Kingdom are only under a temporary authorisation and that these authorisations do not constitute a marketing authorisation.

In [answer to the question](#) asked on the number of deaths due to all other vaccines in the past twenty years [the MHRA provided](#) the usual robotic response about how great the Covid-19 vaccines are and how they are the “single most effective treatment for preventing

serious illness due to Covid-19” but what they did not do is say that they “do not hold this information”. Instead [they revealed that they had received a total of 404](#) reported adverse reactions to all available vaccines (excluding the Covid-19 injections) associated with a fatal outcome between the 1st January 2001 and the 25th August 2021 – a time frame of 20 years and 8 months.

But how does that fare against the number of reported adverse reactions to all temporarily authorised Covid-19 vaccines associated with a fatal outcome? Well, since [the Pfizer jab](#) was rolled out in December 2020 there have been [534 reported deaths](#), meaning that in just 8 months, this “vaccine” alone outnumbers the deaths due to all other vaccines in the past 20 years

[Source](#)

However, the [AstraZeneca viral vector injection](#) has fared much worse with [1,083 deaths](#) being reported to the MHRA since January 2020, more than twice as many than what have been reported due to all other vaccines in the past 20 years.

[Source](#)

There have also been [17 reported deaths](#) due to the [Moderna jab](#) since it was first administered in June 2021, and 28 deaths where the brand of Covid-19 vaccine was not specified in the report.

[Source](#)

Therefore, up to the 15th September 2021 there have been a grand total of 1,662 deaths reported to the MHRA as adverse reactions to all available Covid-19 vaccines in the United Kingdom since the beginning of the year.

Meaning there have been four times as many deaths in just 8 months due to the Covid-19 vaccines than there have been due to every other available vaccine since the year 2001, and now they are administering this experimental treatment to children who are at zero risk of even suffering serious disease due to the Covid-19 virus.
