

“US Instructors” Training Syria Militants for False Flag Chemical Attack, to Justify Airstrikes

According to Russia Ministry of Defense

Russia's Defense Ministry says “US instructors” are training militants to stage false flag chemical attacks in south Syria. The incidents are said to be a pretext for airstrikes on Syrian government troops and infrastructure.

“We have reliable information at our disposal that US instructors have trained a number of militant groups in the vicinity of the town of At-Tanf, to stage provocations involving chemical warfare agents in southern Syria,” Russian General Staff spokesman General Sergey Rudskoy said at a news briefing on Saturday.

“Early in March, the saboteur groups were deployed to the southern de-escalation zone to the city of Deraa, where the units of the so-called Free Syrian Army are stationed.”

“They are preparing a series of chemical munitions explosions. This fact will be used to blame the government forces. The components to produce chemical munitions have been already delivered to the southern de-escalation zone under the guise of humanitarian convoys of a number of NGOs.”

The planned provocations will be widely covered in the Western media and will ultimately be used as a pretext by the US-led coalition to launch strikes on Syria, Rudskoy warned.

“The provocations will be used as a pretext by the United States and its allies to launch strikes on military and government infrastructure in Syria,” the official stated.

“We’re registering the signs of the preparations for the possible strikes. Strike groups of the cruise missile carriers have been formed in the east of the Mediterranean Sea, Persian Gulf and Red Sea.”

Another false flag chemical attack is being prepared in the province of Idlib by the “*Al-Nusra Front terrorist group, in coordination with the White Helmets*,” Rudskoy warned. The militants have already received 20 containers of chlorine to stage the incident, he said.

The US military has dismissed the accusations raised by the Russian Defence Ministry. Pentagon spokesman Adrian Rankine-Galloway described Rudskoy’s statement

as “*extremely absurd*,” RIA Novosti reported.

Moscow and Damascus have repeatedly warned about upcoming chemical provocations, and have highlighted that banned warfare agents have been used by the militants. Earlier this week, Syrian government forces reportedly captured a well-equipped chemical laboratory in Eastern Ghouta. Footage from the facility has been [published](#) by the SANA news agency. The installation contained modern industrial-grade hardware of foreign origins, large amounts of chemical substances as well as crude homemade munitions and their parts.
