*“I have come to lead you to the other shore; into eternal darkness, into fire and into ice.”
Inferno-Dante Alighieri*

The problem with the mRNA Covid-19 vaccine, is not that it’s a vaccine. It’s that it’s not safe. That’s the issue: Safety.

This view is shared by a great many professionals who believe that these potentially-toxic concoctions pose a significant threat to the health and well-being of anyone who chooses to get inoculated.

Do you realize that the mRNA vaccine is a purely synthetic PEG-coated lipid nanoparticle that spreads throughout the body and brain creating conditions for debilitating ailments 3 or 4 years down the road? (More on this below)

Do you realize that these dubious vaccines have not been thoroughly tested, did not undergo critical animal trials, did not complete Phase 3 trials, and were waved through the regulatory process under the “Emergency Use Authorization (EUA)” provision?

What does it mean when we say: “The vaccines were waved through under the Emergency Use Authorization provision?”

It means that the vaccines were not required to meet the same rigorous standards or follow the same protocols as previous vaccines. It means that, by definition, these vaccines are not safe. It means that normal precautionary regulations were suspended in order to put these vaccines into service as fast as possible. Isn’t that worth mulling over before rolling up your sleeve?

There are a number of extremely promising treatments, therapies and medications for Covid, and many more are on their way. (See: Sharyl Attkisson: [“Full Measure”, Vaccines and Treatments](#), You Tube)

But the mRNA vaccine is not among these promising medications. The mRNA vaccine is a grave threat to one’s health and safety. It should never have been “approved”.

And **who is promoting these vaccines** that do not stop the transmission of Covid, do not prevent Covid, and which will have no meaningful impact on the rapidly-declining fatality rate? Who is pushing these potentially-lethal injections?

Is it the reputable scientists, virologists, epidemiologists and other medical experts who don't have a stake in the outcome and who base their judgements on the science alone, or is it the conflicted state bureaucrats, the public health toadies and the billionaire activists who control the media and whose shadowy and sinister motives are still not clear?

Most people know the answer to that question already. It's obvious.

And **why have the views of the naysayers, the contrarians and the critics been painstakingly scrubbed from the MSM and social media? If the efficacy and safety of these vaccines is so unassailable, then why must all public debate be prevented?**

And yourself this: Has the Covid vaccine roll-out been the biggest and most extravagant Madison Avenue "product launch" in American history?

Indeed, it has. The media, Hollywood, the public health authorities, big pharma, global elites and the entire political establishment have joined the full-throated, public relations blitz that is aimed at cajoling every man, woman and child into doing something that could trigger an agonizing medical condition or dramatically shorten their lives.

Why are they doing this? Why have they quashed all debate and silenced their critics? Why are they taking advantage of public hysteria to intensify their mass-vaccination campaign? Why have they obfuscated the truth on so many issues related to Covid including masks, asymptomatic transmission, school closures, lockdowns etc? **Is there even one part of the official Covid narrative that "rings true" or that can withstand the scrutiny of critical analysis?** Does it all have to be lies? Can't we at least mix some truth in with the vast mountain of flagrant fabrications and disinformation?

The truth is, we don't need a vaccine. The case numbers and fatalities are already dropping precipitously around the world. The virus is on its way out. Here's how Pfizer's former Vice President and Chief Scientist for Allergy & Respiratory Disease, Dr. Michael Yeadon, summed it up some months ago:

"There is absolutely no need for vaccines to extinguish the pandemic... You do not vaccinate people who aren't at risk from a disease. You also don't set about planning to vaccinate millions of fit and healthy people with a vaccine that hasn't been extensively tested on human subjects."

He's right, isn't he? And, yet, even now- when the vast majority of people are fully aware that cases and deaths are falling like a stone- they're still rushing-off to their local public health facility to get vaccinated. Explain that to me? Why would anyone willingly get vaccinated when the infection is already dying out and the number of susceptible hosts is rapidly decreasing? What sense does that make?

Do you realize that **we have no data on the long-term adverse effects of these new mRNA vaccines? None.** So, the question is: Why would a public health official put a

vaccine into service without knowing what the long-term effects of that vaccine might be?

He wouldn't, unless he was pressured into doing so, because that would be irresponsible and a violation of his oath to "Do no harm."

Even so, these are the very same vaccines that well-known billionaire activists want to use on all 7 billion people on Planet Earth. Do these "do goodie" billionaires have any idea of the carnage and suffering their mass-vaccination campaign is likely to generate? Or is that the goal, a world with fewer people?

Let's cut to the chase: **What readers really want to know is how these vaccines will impact their health. "How is this going to affect me", that's the bottom line.** But since we have no long-term data, (since there were no long-term trials) we have to depend on the analysis of professionals who have a sense of where the potential problems might arise. Check out this blurb from an article by Dr. Wolfgang Wodarg, lung specialist and former head of the public health department, and Dr. Michael Yeadon, ex-Pfizer head of respiratory research. Here are some of their concerns:

"The formation of so-called "non-neutralizing antibodies" **can lead to an exaggerated immune reaction**, especially when the test person is confronted with the real, "wild" virus after vaccination."

- The vaccinations are expected to produce antibodies against spike proteins of SARS-CoV-2. However, **spike proteins also contain syncytin-homologous proteins, which are essential for the formation of the placenta in mammals such as humans.** It must be ruled out that a vaccine against SARS-CoV-2 could trigger an immune reaction against syncytin-1, as it may otherwise result in infertility of indefinite duration in vaccinated women.

- **The mRNA vaccines from Pfizer/BioNTech contain polyethylene glycol (PEG). 70% of people develop antibodies against this substance. This means that many people can develop allergic, potentially fatal reactions to the vaccination.**

- The much too short duration of the study does not allow a realistic estimation of the late effects. As in the narcolepsy cases after the swine flu vaccination, **millions of healthy people would be exposed to an unacceptable risk if an emergency approval were to be granted** and the possibility of observing the late effects of the vaccination were to follow." (["That Was Quick"](#), Lockdown Skeptics)

Let's summarize:

The new messenger RNA vaccines could make recipients more susceptible to serious illness or death. (The vaccine could pave the way for autoimmune disease or ADE Antibody-dependent Enhancement.)

Spike proteins can "trigger an immune reaction" that will "result in infertility."

The new vaccines contain polyethylene glycol (PEG) which can be "potentially fatal."

The trials were not long enough to determine whether the vaccines are safe or

not. FDA approval does not mean “safe”. Quite the contrary. The FDA is “captured” in the same way the FAA is captured.

Naturally, the analysis of Yeadon and Wodarg has appeared nowhere in the MSM. (Also, Yeadon was recently removed by Twitter.) **Experts in their field of learning are no longer allowed to candidly discuss their concerns in a public forum if their conclusions do not jibe with the official narrative.** The push to censor opposing points of view is greater now than any time in our 245-year history. **The people who now insist that you get vaccinated, are the very same people who are doing everything in the power to prevent you from knowing the truth about their vaccines.**

And what is the truth?

The truth is that ‘universal vaccination’ factors quite large in the elitist restructuring agenda that has nothing to do with global pandemic and everything to do with social control. At its heart, Covid is a political phenomenon more than it is a public health emergency. One is merely a fig leaf for the other.

Have you ever heard of Prion disease?

The CDC describes **Prion diseases as “a family of rare progressive neurodegenerative disorders that affect both humans and animals. They are distinguished by long incubation periods,** characteristic spongiform changes associated with neuronal loss, and a failure to induce inflammatory response.

The causative agents of TSEs are believed to be prions. The term “prions” refers to abnormal, pathogenic agents that are transmissible and are able to induce abnormal folding of specific normal cellular proteins called prion proteins that are found most abundantly in the brain..... **The abnormal folding of the prion proteins leads to brain damage and the characteristic signs and symptoms of the disease. Prion diseases are usually rapidly progressive and always fatal.” (CDC)**

Is this what the future holds for millions of recipients of the mRNA vaccine?

We think it is very likely.

In an earlier article, we posted an excerpt from an interview with Dr. Chris Shaw, Ph.D, Specialist in Neuroplasticity and Neuropathology. Shaw described this very condition that could emerge as a reaction to agents in the mRNA vaccine that find their way into the brain. Here’s what he said:

“The mRNA lipid-coated PEG-construct- by Moderna’s own study-does not stay localized but spreads throughout the body including the brain. Found in animal studies in bone marrow, brain, lymph nodes, heart, kidneys liver, lungs etc **Doctors are saying that the vaccine does NOT cross the blood-brain barrier, but that is NOT true. ...If it reaches the brain there will be an auto immune response that will cause inflammation What characterizes virtually all neuro-degenerative diseases is this misfolded protein that is characteristic to Lou Gerrigs disease, to Alzheimer’s, to Parkinsons to Huntington’s etc.** They are different proteins, but they tend to form these sheets of misfolded proteins called Beta Sheets. Now you are asking cells in various parts of the body-including the brain- to make alot of these proteins and release them to

the outside, and , are we sure that's what' it's all doing? Are you getting clusters of misfolded proteins inside neurons? That would be a bad thing to do.. So, you'd like to know where it is, how much of it there is, and which groups of neuronal groups its targeted. .and those are the kinds of questions you like the companies to have solved long before they got authorization and discovered some years later that they have a problem."

"This is a vast experiment that should have been done in the lab on animals and now it is being done on people ..The potential is that you are going to harm alot of people while you do this experiment."
(["NEUROSCIENTIST'S CONCERNS ABOUT COVID VACCINES"](#), Chris Shaw, Ph.D, Specialist in Neuroplasticity and Neuropathology)

Is this what we should expect in the future, a sharp uptick in neurological disorders like Lou Gehrig's disease, Alzheimer's and Parkinson?

Apparently, so. Check out this longer excerpt from a research paper by Dr. J. Bart Classen:

"Vaccines have been found to cause a host of chronic, late developing adverse events. Some adverse events like type 1 diabetes may not occur until 3-4 years after a vaccine is administered[1].... Given that type 1 diabetes is only one of many immune mediated diseases potentially caused by vaccines, **chronic late occurring adverse events are a serious public health issue....**

RNA based vaccines offers special risks of inducing specific adverse events. One such potential adverse event is prion-based diseases caused by activation of intrinsic proteins to form prions. A wealth of knowledge has been published on a class of RNA binding proteins shown to participating in causing a number of neurological diseases including Alzheimer's disease and ALS....

...In the current paper **the concern is raised that the RNA based COVID vaccines have the potential to cause more disease than the epidemic of COVID-19.** This paper focuses on a novel potential adverse event mechanism causing prion disease which could be even more common and debilitating than the viral infection the vaccine is designed to prevent.

The current analysis indicates ... RNA based COVID-19 vaccine contains many of these RNA sequences that have have the potential to induce chronic degenerative neurological diseases....

Genetic diversity protects species from mass casualties caused by infectious agents. One individual may be killed by a virus while another may have no ill effects from the same virus. **By placing the identical receptor, the spike protein, on cells of everyone in a population, the genetic diversity for at least one potential receptor disappears. Everyone in the population now becomes potentially susceptible to binding with the same infectious agent....**

...The results indicate that the vaccine RNA has specific sequences that may induce TDP-43 and FUS to fold into their pathologic prion confirmations...**The folding of TDP-43 and FUS into their pathologic prion confirmations is known to cause ALS,... Alzheimer's disease and other neurological degenerative diseases.** The enclosed finding as well as additional potential risks leads the author to believe that **regulatory approval of the RNA based vaccines for SARS-CoV-2 was premature and that the vaccine may cause much more harm than benefit.** (["Covid-19 RNA Based Vaccines](#)

[and the Risk of Prion Disease”](#), J. Bart Classen, MD., Microbiology and Infectious Diseases.”)

Dr. Classen’s analysis is disturbing, but in no way, comprehensive. The new regime of mRNA vaccines fails on a great many levels which we will discuss in future articles. These “gene editing” vaccines are not medicine, they are strange and menacing hybrid cocktail that was created to achieve an elusive political objective of which we still know very little. If there was ever a time to stand back from the crowd, resist groupthink, and employ one’s own critical thinking skills to decide whether the risks of vaccination far outweigh the benefits; this is it. The choice is yours to make.
