

The Gates / Fauci Vaccine Developed by Moderna. Video Featuring Robert F. Kennedy Jr. and Dr. Andrew Kaufman

The Stepford Wives Vaccine - Just Say No

This is a four-minute video featuring Robert F. Kennedy Jr. and Dr. Andrew Kaufman that explains exactly what is in the Gates/Fauci covid19 vaccine currently being developed by Fauci's own vaccine company, Moderna.

Most of the vaccines currently under process by big pharma are likewise mRNA vaccines, a type never before used on humans.

The Gates/Fauci vaccine against covid-19 is no ordinary vaccine. It uses three needles, two of which are electrodes that will alter the DNA of every cell in the body.

Gates and Fauci have bypassed all required phase-one animal testing, normally a 10-year testing requirement, as well as human safety testing. This assault on our bodies will likely be issued as mandatory, since it is being developed under emergency powers. Trump's attorney, Alan Dershowitz, has stated categorically that "you have no constitutional right to refuse a vaccine".

.

Republicans amended the Democrat's bill to track and surveil all Americans in our homes. Their main concern about this latest stimulus bill (which includes the HR 6666 Trace Act) is to indemnify those doctors who may injure you with the countless mandatory vaccines being planned.

In other words, neither party is demonstrating any interest in protecting the health or civil liberties of American citizens. They are interested in protecting the profits of insurance companies.

There now exist five proven cures for this virus, in wide use throughout the world but falsely maligned in the US, all of which are safe, effective, cheap and available. (IV Vitamin C, Interferon alpha B, ivermectin, hyperbaric oxygen therapy, and hydroxychloroquine and zinc, which has been in use safely for 30 years)

Big Pharma cannot make money from any of the proven cures - which explains their temper

tantrums and demand for useless but expensive vaccines. Useless, because in 30 years of research scientists have never been able to create a corona virus vaccine that worked and was safe for humans.

For a more detailed scientific analysis of the profound hazards of mRNA vaccines, I include this from a colleague in the gene modification field.

An RNA vaccine like this has never been approved for human use but it has been successfully used with animals. But the bar is much lower for animals – you don't care if a few die. This is a risky approach. They take the genome of the virus and then snip out the mRNA for just the S protein which binds to ACE2.

Then they use a vector to get the mRNA into the human cells so it is expressed and some cells will translate the mRNA's codons into the amino acid peptide of the S protein and present it on the cell surface.

Those S proteins will be detected by the IgM antibody on a B-Cell surface and start the cascade of events that leads to production of protective IgG antibodies. The human cells will be seen as infected and will be killed. So you do lose a little bit of tissue. Some will feel as if they have the flu. You hope the correct mRNA is included and you don't accidentally introduce the whole genome of the virus. And the IgG will probably last for two years.

But if you get ADE after the virus mutates then this could result in a much worse illness later on. But we don't know if ADE will happen. Generally a safer method is to just produce S protein on a wet bench and inject just the S protein to form an immune response but when this was tried with SARS it made the disease worse not better. Live attenuated viruses were tested for SARS but they reverted to wild type and killed the host. Risky stuff!

Below is RFK Jr's commentary about the pump-and-dump scheme evidently promulgated by Fauci for the stock of his vaccine company, Moderna. His human trials have not only failed; they have landed 9 test subjects in the hospital in serious condition.

Robert F. Kennedy Jr. This morning, Moderna was up 39% and rising on the news of its "successful" COVID vaccine trials. All 5 networks were parroting Moderna's claim that its fast track clinical trial was a triumph. Then our Instagram exposed the entire canard as smoke and mirrors; the shocking 20% "serious" injury rate (medical intervention or hospitalization required) among the extremely healthy volunteers in the high-dose group means the vaccine is DOA.

Worse yet, the vaccine appears to trigger production of the kind of "binding antibodies" that presage the "pathogenic priming" that caused deaths and severe injuries among animals and children in earlier tests of experimental coronavirus vaccines. Following the release of our analysis, alert Wall Street speculators shorted Moderna's stock and investors began selling off.

Savants realized that Moderna's biggest inside investor had been dumping shares all week. Moments ago, former SEC Lawyer Jacob Frankel appeared on CNBC calling for a criminal investigation and possible trading suspension.

The sell-off has forced Moderna's embarrassed media boosters (CNN) to reassess their sunny credulity at the clinical trials. In earlier times, a dangerous vaccine like this would have sailed through HHS's corrupt approval process. CDC would have reflexively mandated it for 75 million children. For the first

time the public is watching how the sausage gets made. This experience gives me hope that we can kill these boondoggle vaccines the way one expels cockroaches—with sunlight. We might even succeed in training the press to do their own research and recognize fraud before they are once again gulled and humiliated by Fauci and his crooked cronies.

“Anti-vax” is a loaded term, like “conspiracy theorist”, used to dismiss and marginalize and berate all scientific evidence that contradicts the deep state agenda and big pharma’s profit-driven propaganda.
