The UK is facing an unprecedented number of new autism cases, according to new research. Figures in Scotland, which are among the most comprehensive available in the British isles, reveal that the autism rate among students at Scottish schools is up 1,360% percent since 1998, with no perceivable end in sight.

This amounts to a one-in-68 children rate of autism, which the London School of Economics projects is costing taxpayers around \$54 billion annually. This is up from about \$2 billion in 2001, demonstrating the immense toll this harrowing disease is costing the public.

But even these figures may be too low, warns *Age of Autism*, as they disguise the actual number of autism cases among older students, while focusing more on autism rates among younger students. The actual present rate of autism in the UK, reports John Stone, is probably much closer to one in 30 students, based on data supplied by the Scottish government.

The immense growth rate of autism in Scotland over the past 16 years is highlighted by the following:

Year | Total number of pupils | Number of pupils with an ASD

1998	758,414	820
1999	755,081	959
2000	751,243	1,245
2001	745,063	1,515
2002	738,597	2,204
2003	732,122	2,663
2004	723,554	3,090
2005	713,240	3,484
2006	702,737	2,443
2007	692,215	3,919
2008	681,573	4,900
2009	676,740	5,254
2010	673,133	6,506
2011	670,511	7,801
2012	671,218	8,650
2013	673,530	9,946

Aside from an anomalous reduction in ASD cases between 2005 and 2006, you can clearly see that the [autism](#) rate in Scotland has simply exploded, much like it has in the U.S. and

other Western nations over the past several decades.

One would think that health authorities and lawmakers would take note of this and start addressing some of the elephants in the room, including the ever-expanding vaccination schedule. But instead, they remain silent as the financial burden of treating these damaged [children](#) escalates into financial territory so unsustainable that government health systems now face total collapse.

US to spend a total of \$7 trillion just to treat every person who currently has autism

The same study that procured these figures for the UK found that the situation is far worse in the U.S. Between the costs associated with treating both children and adults with ASD — more than 3.5 million Americans, both young and old, have been diagnosed with ASD — taxpayers and insurance companies spend huge amounts to treat autistic individuals with or without intellectual disability.

“The cost of supporting an individual with an ASD and intellectual disability during his or her lifespan was \$2.4 million in the United States and £1.5 million (US \$2.2 million) in the United Kingdom,” reports the study. “The cost of supporting an individual with an ASD without intellectual disability was \$1.4 million in the United States and £0.92 million (US \$1.4 million) in the United Kingdom.”

“The largest cost components for children were special education services and parental productivity loss. During adulthood, residential care or supportive living accommodation and individual productivity loss contributed the highest costs. Medical costs were much higher for adults than for children.”

This translates into a total cost of \$7 trillion to treat every person with autism in the U.S. over the course of his or her lifetime. And this is just at the *current* autism rate — over the next several decades, as many as one in two children are expected to have autism, which portends a complete collapse of the healthcare system.

Be sure to check out Massachusetts Institute of Technology (MIT) researcher Dr. Stephanie Seneff’s groundbreaking research into [glyphosate](#), the active ingredient in Monsanto’s Roundup herbicide. She found that this prolific chemical damages gut bacteria and blocks the uptake of vital nutrients, triggering autism and other serious health conditions:
