VIDEO #3: (Nov.8, 2022) Nanoparticles – Professor Masayasu Inoue who is Emeritus Professor at Osaka City University School of Medicine:

[Click here to watch the video](#)

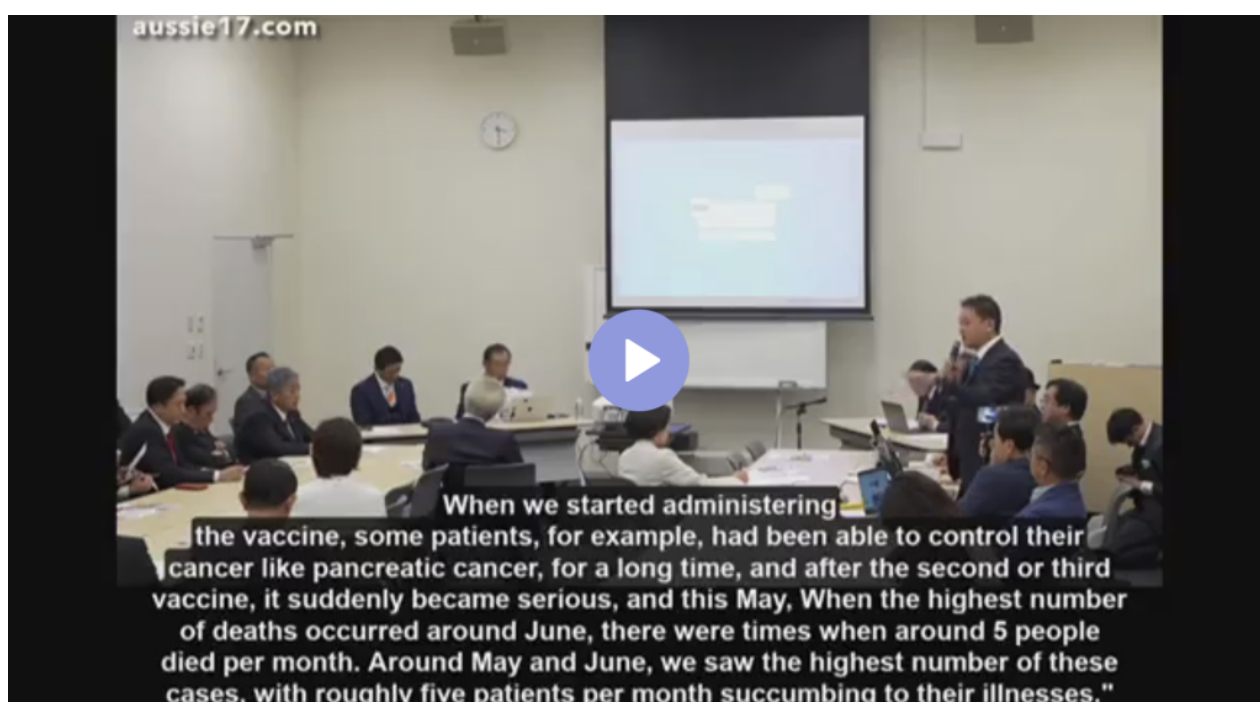

“We know that vaccine nanoparticles circulate in the bloodstream for several months. In rats, the half-life is 1 week; in humans, it is 10 weeks. Even though they think it hits the muscle, 99% of the time it hits beyond the muscle. It goes into whole body around in about an hour.

This happens to patients at the vaccination site, and patient goes into anaphylactic shock. So it usually happens on the day of the injection, and the nanoparticles that keep circulating in the blood for a long time are the production of nanoparticles(spike).

The messenger (RNA) and spike proteins were detected in the blood of vaccinated people a few months later There's even a paper that says they were able to detect it, which means that it circulates and enters the cells of all organs.

The liver and spleen are the most common, but the third is bone marrow. The cell division that creates blood cells is extremely intense. The fourth one gathers in the ovaries, and the fifth and sixth ones have testicular conditions. The vaccine is concentrated in the organs that create the next generation in both women and men."

VIDEO 04 – (Nov.16, 2023) Clinic Director from Ginza, Tokyo shares his observation on his vaccinated patients (Turbo Cancer):

[Click here to watch the video](#)

When we started administering the vaccine, some patients, for example, had been able to control their cancer like pancreatic cancer, for a long time, and after the second or third vaccine, it suddenly became serious, and this May, When the highest number of deaths occurred around June, there were times when around 5 people died per month. Around May and June, we saw the highest number of these cases, with roughly five patients per month succumbing to their illnesses.

Then, we are seeing patients with conditions like giant cell diabetes or light cell leukemia — diseases that are very rare and not often encountered in clinical practice. The cardiovascular specialist told them that they had never seen such diseases before though he read about them in books. I'm still wondering why there are so many people like this."

VIDEO 05 – (Nov.12, 2023) Announcement from Japanese obstetricians and gynecologists to pregnant women and those who want to become pregnant about the coronavirus vaccine

[Click here to watch the video](#)

"Major illnesses and abnormalities that have never been seen before are being found in pregnant women who received the new coronavirus vaccine during or before pregnancy. Pregnant women have a stronger blood clotting effect than usual to protect themselves from bleeding during childbirth. Then, administering the new coronavirus vaccine will make thrombosis much more likely to occur, putting you at greater risk of thrombosis than necessary. Blood clots can occur not only in the pregnant woman but also in the baby, making it difficult for blood to flow to the baby, causing blood clots to get stuck in the placenta, and other dangerous situations. The coronavirus vaccine is currently under research and its safety is not guaranteed. Please make your decisions carefully!"

VIDEO 06 – (Nov. 6, 2023) Japan's largest national news broadcaster NHK just mentioned COVID-19 vaccine deaths!

[Click here to watch the video](#)

Regarding a woman in her 50s in the prefecture who died the day after receiving the new coronavirus vaccine – awarded 44 million yen (approx 300K USD). Nationally, over 2000+ vaccine deaths applications still in process.

VIDEO 07 – Japanese people take to the streets to make the general public aware of the harms of covid vaccines (Oct. 30, 2023)
