Ovaj video prati kretanje ugla Severne Kule Zgrade 7 STC-a 11. septembra 2001, u periodu od približno 2,5 sekunde. Ovo znači da je padala kroz sebe preko 30 metara bez otpora, što je nemoguće u bilo kakvom prirodnom scenariju. Ovaj period slobodnog pada je čvrst dokaz da su eksplozivi morali da budu korišćeni da bi se ova zgrada srušila.

U konačnom nacrtu za javno komentarisanje (Avgust 2008), NIST je porekao da je Zgrada 7 pala slobodnim padom. U konačnom izveštaju Novembra 2008. godine, oni su se predomislili i priznali da je bio slobodan pad, ali su porekli njegovu očiglednu značajnost.
