

Warning: Gates-Funded Factory Breeds 30 Million Mosquitoes a Week for Release in 11 Countries

Billionaire Bill Gates, who is funding the project, “assures” us it’s not a scene from a horror movie.

Inside a two-story brick building in Medellín, Colombia, scientists work in muggy labs breeding 30 million genetically modified mosquitoes weekly in labs.

They tend to the insects’ every need as they grow from larvae to pupae to adults, keeping the temperature just right and feeding them generous helpings of fishmeal, sugar, and, of course, blood. They are then released into the wild in 11 countries.

Billionaire Bill Gates, who is funding the project, assures us it’s not a scene from a horror movie.

“The factory is real. And the mosquitoes that are released do not terrorize the locals. They help save and improve millions of lives.”

Just as his ‘covid vaccines’ have ‘saved’ millions of lives or his’ [previous vaccination projects](#) have left thousands of women [sterile](#) in [India](#) and Kenya. Or even his Polio vaccines have caused paralysis, seizure, and febrile convulsions in Sub-Saharan Africa, Afghanistan, Congo, and the Philippines.

Wolbachia Bacterium

“The mosquitoes grown in this factory carry the Wolbachia bacterium, which prevents them from transmitting dengue and other viruses – including Zika, chikungunya, and yellow fever – to humans. By releasing them and breeding them with wild mosquitoes, they spread the bacteria, reducing virus transmission and protecting millions of people from disease,” [claims](#)

[Gates](#) – just as his ‘covid vaccines’ have ‘reduced’ virus transmission and have ‘protected’ millions of people from disease.

Research conducted in Indonesia has shown that mosquitoes carrying *Wolbachia* offer 77 percent protection against dengue fever, and 86 percent are effective against hospitalization. Just like his ‘corona vaccines’ offer almost 100 percent ‘protection’ against covid and hospitalization.

11 countries

The mosquitoes are released in Colombia, Brazil, Mexico, Indonesia, Sri Lanka, Vietnam, Australia, Fiji, Kiribati, New Caledonia, and Vanuatu – eleven countries total.

Gates plans to breed hundreds of millions of *Wolbachia* mosquitoes.

Did Gates and his researchers consider all the variables that are likely to occur with a program where a new vector of spreading a bacteria by an insect that bites humans and other animals and, in the process, injects that bacteria into them?

Where is the one, two, five, and ten-year report on the safety of such a program from a controlled environment?

What could possibly go wrong?
