Back in July of this year we reported that Ohio-based Attorney Thomas Renz was filing a federal lawsuit in Alabama based on a “sworn declaration, under threat of perjury,” from an alleged whistleblower who claims to have inside knowledge of a cover-up of reported deaths filed with the Vaccine Adverse Event Reporting System (VAERS).

See: [Attorney Files Lawsuit Against CDC Based on “Sworn Declaration” from Whistleblower Claiming 45,000 Deaths are Reported to VAERS – All Within 3 Days of COVID-19 Shots](#)

Attorney Renz spoke at an event in Colorado this past weekend, and stated that more whistleblowers have now come forward, and that the death rate with those taking the COVID-19 vaccines is much higher than they originally thought.

Presenting data that he claims comes directly from the CMS (Centers for Medicare & Medicaid Services) database, there have been 48,465 deaths among CMS beneficiaries within 14 days of a 1st or 2nd dose of a COVID-19 vaccine.

There are about 59.4 million Americans covered by Medicare, representing 18.1% of the population, so these are staggering numbers!

In his presentation, Renz states that they chose deaths within 14 days of vaccination, because the federal health agencies are no longer counting deaths within 14 days of a COVID-19 as a death among the “vaccinated,” but among “unvaccinated.”

Remdesivir Deaths: The Real Numbers

7

Remdesivir (Veklury) deaths recorded in CMS database (2021):

- 7,960 beneficiaries prescribed Remdesivir for COVID-19
- 2,058 beneficiaries died

25.9% remdesivir patients died

46% of those died within 14 days of remdesivir treatment

How much does remdesivir cost?

Hospitals will pay \$390 per vial of remdesivir, which equates to \$2,340 (government) to \$3,120 (private insurance) for a five-day course of the drug, using 6 vials

(source: <https://www.kff.org/coronavirus-covid-19/issue-brief/how-could-the-price-of-remdesivir-impact-medicare-spending-for-covid-19-patients/>)

Renz also presented very damning data on the drug Remdesivir, the new COVID-19 drug that was rushed to market while existing, safe and effective older drugs like Ivermectin are prohibited in hospital settings.

According to CMS data, almost 26% of people put on Remdesivir die. But it is a huge money maker for the government and Big Pharma.

Ivermectin Safety Profile: Safer and Cheaper Than Remdesivir

9

Ivermectin Safety Profile as shown in the CMS data

| Universe | # Beneficiaries Prescribed Ivermectin in 2021 | # Beneficiaries who died | % Beneficiaries who died |
|----------------|---|--------------------------|--------------------------|
| All patients | 142,778 | 5,093 | 3.5% |
| COVID patients | 44,709 | 3,238 | 7.2% |

Ivermectin average amount per patient: \$24

Remdesivir average is \$2,340 to \$3,120 for one 5-day treatment

By contrast, only 3.5% of people put on Ivermectin died, according to CMS data. But there are no longer any patents on Ivermectin, so it is not a money maker for the government and Big Pharma.

As attorney Renz states: “You’re being defrauded by your government!”

He also goes on to show what are allegedly documents from Pfizer that seem to suggest they knew that “shedding” occurred with their COVID-19 mRNA shots.

Here is the presentation. I have excerpted the key data he presented. This is from our [Bitchute channel](#), and it will also be on our [Rumble channel](#).
