Theme: [Biotechnology and GMO](#)

We bring to the attention of Global Research readers this important commentary by Dr. Joseph Mercola.

The fundamental issue is who owns the intellectual property rights over Tamiflu. The media reports suggest that the Swiss pharmaceutical company Roche will make billions.

While the drug is produced by Roche, it was developed by Gilead Sciences Inc. which owns the intellectual property rights. Gilead, which has maintained a low profile, has outsourced the production to Roche.

Donald Rumsfeld was appointed Chairman of Gilead Sciences, Inc. in 1997, a position which he held in the years prior to becoming Secretary of Defense in the Bush administration. Rumsfeld had been on the Board of Directors from the establishment of Gilead in 1987.

As confirmed in a company press statement in 1997, Donald H. Rumsfeld assumed the position of Chairman, of GILEAD: :

"Gilead is fortunate to have had Don Rumsfeld as a stalwart board member since the company's earliest days, and we are very pleased that he has accepted the Chairmanship," Dr. Riordan said. "He has played an important role in helping to build and steer the company. His broad experience in leadership positions in both industry and government will serve us well as Gilead continues to build its commercial presence."

According to company statement: Gilead Science Inc "has been active in the development of inhibitors for the potential treatment and prevention of viral influenza and protease inhibitors for the potential treatment of HIV"

"The Company's research and development efforts encompass three interrelated programs: small molecule antivirals, cardiovascular therapeutics and genetic code blockers for cancer and other diseases. Gilead's expertise in each of these areas has also resulted in the discovery and development of non-nucleotide product candidates, including neuraminidase inhibitors for the potential treatment and prevention of viral influenza and protease inhibitors for the potential treatment of HIV"

Also find below an article published in the SF Chronicle, which points to the relationship between GILEAD and Roche in relation to the Rights over Tami Flu.

Who Owns the rights on Tamiflu

by Joseph Mercola

www.mercola.com

✖ Finally, the pieces of the puzzle start to add up. Not long ago, President Bush sought to [instill panic in this country](#) by telling us a minimum of 200,000 people will die from the avian flu pandemic, but it could be as bad as 2 million deaths in this country alone.

This hoax is then used to justify the immediate purchase of 80 million doses of Tamiflu, a worthless drug that in no way shape or form treats the avian flu, but only decreases the amount of days one is sick and can actually contribute to the virus having more lethal mutations.

So the U.S. placed an order for 20 million doses of this worthless drug at a price of \$100 per dose. That comes to a staggering \$2 billion.

We are being told that Roche manufactures Tamiflu and, [in a recent New York Times article](#), they were battling whether or not they would allow generic drug companies to help increase their production.

But if you dig further you will find that a drug was actually developed by a company called Gilead that 10 years ago [gave Roche the exclusive rights to market and sell Tamiflu](#).

Ahh, The Plot Thickens...

If you read the link below from Gilead, you'll discover Defense Secretary Donald Rumsfeld was made the chairman of Gilead in 1997.

Since Rumsfeld holds major portions of stock in Gilead, he will handsomely profit from the scare tactics of the government that is being used to justify the purchase of \$2 billion of Tamiflu.

TEXT OF 1997 PRESS RELEASE BY GILEAD SCIENCE INC

Donald H. Rumsfeld Named Chairman of Gilead Sciences

Foster City, CA, January 3, 1997 – Gilead Sciences Inc. (Nasdaq: GILD) today announced that board member Donald H. Rumsfeld will assume the position of Chairman, effective immediately. Mr. Rumsfeld succeeds Michael L. Riordan, M.D., who founded Gilead in 1987 and has served as Chairman since 1993. Dr. Riordan will continue to serve as a director on the board.

"Gilead is fortunate to have had Don Rumsfeld as a stalwart board member since the company's earliest days, and we are very pleased that he has accepted the Chairmanship," Dr. Riordan said. "He has played an important role in helping to build and steer the company. His broad experience in leadership positions in both industry and government will serve us well as Gilead continues to build its commercial presence."

"In my years with Gilead, I have witnessed the evolution of one of the industry's premier

biotechnology companies,” Mr. Rumsfeld said. “Michael Riordan’s founding vision and enormous accomplishments are evident in the VISTIDE® product approval, deep pipeline and talented team that will continue to move Gilead to develop novel treatments for viral diseases.”

Mr. Rumsfeld, who joined Gilead as a director in 1988, is currently in private business and is distinguished for his accomplishments in both industry and government. Mr. Rumsfeld served as chief executive officer of G.D. Searle, a worldwide pharmaceutical company, from 1977 to 1985. During this time, his stewardship of Searle earned him awards as the Outstanding Chief Executive Officer in the pharmaceutical industry in 1980 and 1981. He also served as chairman and chief executive of General Instrument Corporation, a diversified electronics company and world leader in broadband and all digital high definition television technology.

A graduate of Princeton University, Mr. Rumsfeld has served in numerous positions of public service, including four terms in the U.S. Congress, U.S. Ambassador to NATO, White House Chief of Staff and as the 13th Secretary of Defense. In 1977, Mr. Rumsfeld was awarded the nation’s highest civilian award, the Presidential Medal of Freedom.

In addition to Gilead, Mr. Rumsfeld presently serves as an advisor to several companies and as a member of the board of directors of ABB AB; Gulfstream Aerospace Corp.; Kellogg; MetriCom, Inc.; Sears, Roebuck and Co. and Tribune Company. Mr. Rumsfeld’s current civic activities include service on the board of trustees of the Eisenhower Exchange Fellowship, Freedom House and the RAND Corporation.

Dr. Riordan will continue to assist the company with strategic direction through his involvement on the board of directors. Since founding the company in 1987, Riordan has overseen Gilead’s evolution to a leading biotechnology company with its first approved product and a diversified pipeline of antiviral therapies.

“Michael Riordan’s vision and leadership have guided Gilead from a start-up to a commercial company, and we are pleased to rely on his continued counsel as an active board member,” John C. Martin, Ph.D., President and Chief Executive Officer of Gilead said. “Over the past several years, I have enjoyed working with Don Rumsfeld as an active director and look forward to his new role as Chairman as we continue to build the Gilead business.”

Gilead Sciences is a leader in the discovery and development of a new class of human therapeutics based on nucleotides, the building blocks of DNA and RNA. In 1996, Gilead’s first product, VISTIDE (cidofovir injection), was cleared by the U.S. Food & Drug Administration for the treatment of cytomegalovirus (CMV) retinitis in patients with AIDS. Gilead has other nucleotide product candidates in human testing for the potential treatment of viral diseases caused by CMV, human immunodeficiency virus (HIV), hepatitis B virus, herpes simplex virus and human papillomavirus.

The Company’s research and development efforts encompass three interrelated programs: small molecule antivirals, cardiovascular therapeutics and genetic code blockers for cancer and other diseases. Gilead’s expertise in each of these areas has also resulted in the discovery and development of non-nucleotide product candidates, including neuraminidase inhibitors for the potential treatment and prevention of viral influenza and protease inhibitors for the potential treatment of HIV

Biotech firm wants to regain control of avian flu drug
Gilead says deal with Roche Inc. threatens Tamiflu's production

[Sabin Russell, Chronicle Medical Writer](#)

Friday, June 24, 2005

Citing "ongoing neglect of the product," a Bay Area biotech company is attempting to reclaim control of Tamiflu, an antiviral drug it sold to Swiss pharmaceutical giant Roche Inc. that has since emerged as the world's only practical weapon against a potential pandemic of avian flu.

The Foster City-based Gilead Sciences, best known for its AIDS drug Viread, notified Roche on Thursday that it was terminating the 1996 agreement that gave the Swiss company exclusive rights to make and sell Tamiflu.

Gilead executives disclosed that they have been peppering Roche with complaints about its marketing of Tamiflu for five years, and that manufacturing glitches have been responsible for earlier shortages of a drug now deemed vitally important to public health.

Formerly a lackluster seller in the market for drugs to treat influenza, Tamiflu has become a valuable commodity since December 2003, when scientists became alarmed that a new flu strain that primarily killed chickens in Southeast Asia was starting to kill people who lived in close proximity to the birds.

In April, Roche reported its first quarter sales of Tamiflu quadrupled to \$330 million.
