A video has <u>surfaced</u> from what appears to be January 2021 of World Bank President David Malpass explaining that Pfizer is "hesitant" to distribute its vaccine in countries which refuse to grant legal indemnity from liability for adverse events. He says:

The immediate problem is indemnification. Pfizer has been hesitant to go into some of the countries because of the liability problems, they don't have a liability shield. So we work with the countries to try to do that. But I think also some of the other vaccine manufacturers may be able to go into countries because they're operating through subsidiaries. This is all something that we're exploring, and our goal, my goal, is to have vaccines available throughout the developing world based on what their countries decide. We've got financing available but the countries need to choose systems and then begin buying or receiving the vaccines.

If Pfizer is so confident that its vaccine has been proven safe in rigorous trials, why is it unwilling to take responsibility for any problems?

And if it is unwilling to take the risk with its own product, how is that going to persuade the vaccine-hesitant to take the risk themselves?

The Pfizer vaccine has been <u>linked</u> with 388,618 adverse events in the UK to date, including 628 deaths.

Taiwan has <u>halted</u> its use in teenagers due to concerns about the risk of myocarditis.

Yet a <u>cloak of secrecy</u> has been thrown over the approvals process and the company has <u>come under fire</u> for "war profiteering" by making huge profits during the pandemic.

Pharmaceutical companies are profit-driven entities and rules on transparency and liability exist to keep them honest and ensure only safe, effective drugs are provided to the public. It may turn out to be a big mistake to have allowed them to avoid this scrutiny and accountability just because many were desperate for a medical way out of the pandemic.
