

A series of photos by <u>US photographer Eric Pickersgill</u> shows people staring into the space where their phone usually is.

## 5G Cell Phone Radiation: How the Telecom Companies Are Losing the Battle to Impose 5G Against the Will of the People

## by Claire Edwards, 4 October 2019

(https://www.globalresearch.ca/telcos-losing-battle-impose-5g/5691065) (Revised 17 December)

The telecommunications companies and the mainstream media would have you believe that the race to roll out 5G is unstoppable. That you are nothing and no one in the face of a lethal multi-trillion-dollar agenda imposed by some of the most powerful entities on the planet.

They thought that if they called their new, alleged "communications technology", adapted from the military  $\underline{\text{Active Denial Technology}}$ , "5G" or fifth generation, the public would just assume that it was more of the same as 4G, 3G or 2G. And if they could characterise the rollout as a race, the public would not have enough time to find out what a killer technology 5G is. How wrong they were! Not only has the public found out, but now they know how lethal previous generations of wireless technology – to be used concurrently with 5G – are as well.

Below is the evidence from a number of different countries that the pushback is huge and growing. The telcos have lost the propaganda war, despite their control of the mainstream media, from which not a whisper of the dangers of 5G is heard, and of social media and Youtube, who have been desperately deleting millions of accounts to silence the naysayers.

As this article went to press, support arrived from an unexpected source. In an impassioned speech before the <u>United Nations General Assembly on 24 September 2019</u>, <u>UK Prime Minister Boris Johnson</u> stated that digital authoritarianism is not the stuff of dystopian fantasy but of an emerging reality. <u>He described the Internet of Things</u>, "smart" cities and Al as a <u>giant</u>, <u>dark thundercloud lowering ever more oppressively over the human race</u>, a gathering force reshaping the future of humanity over which the human race has no control and from which, in future, there may be nowhere to hide.

He asked if algorithms could be trusted with our lives and hopes and whether machines should be allowed to doom us to a cold and heartless future in an Orwellian world designed for censorship, repression and control. He recalled the <u>Universal Declaration of Human Rights</u> and endorsed its ideals of upholding freedom of opinion and expression, the privacy of home and correspondence, and the right to seek and impart information and ideas

He exhorted the academic committees, company boards and industry standards groups who are writing the rulebooks of the future, making ethical judgements, and choosing what will or will not be rendered possible to find the right balance between freedom and control, between innovation and regulation, between private enterprise and government oversight. He insisted that the ethical judgements inherent in the design of new technology must be made transparent to all and that joint efforts must be made to agree a common set of global principles to shape the norms and standards that will guide the development of emerging technology.

What follows is a citizen journalist's list of the actions taken to halt 5G and reports and complaints that have discredited this Machiavellian attempt to foist a disastrous technology on the world in 2019. It is not an exhaustive list and I extend my apologies to all those whose efforts I may have overlooked here and much gratitude to all who have contributed to making this pushback so successful.

However, we cannot afford to be complacent and, in particular, we must work to stop the use of the Earth orbits and the stratosphere to beam 5G down to Earth, for this puts the ionosphere and the entire planet at risk. We must also work to ensure that the use of street lights with blue light for this anti-life agenda is rapidly reversed.

The effort to stop 5G is still gathering momentum and we must continue to work together and tirelessly to protect all life on Earth and the planet itself until this demented plan is relegated to the history books as the most Mephistophelian scheme in the history of humankind.

| 1 | International<br>2018 | International Telecommunication Union urges harmonisation of exposure limits. International RF-EMF exposure guidelines refer to the guidelines of the International Commission on Non-Ionizing Radiation Protection (ICNIRP) [b-ICNIRP 1998], or of the Institute of Electrical and Electronics Engineers (IEEE) [b-IEEE C95.1]. These limits are currently under review [b-ICNIRP]. A small group of countries, regions or even cities within the same country, especially in Europe (e.g., Poland, Russia, Italy, Switzerland, Paris city and regions in Belgium), use limits that are ten to a hundred times lower. China [25 times lower than the EMF recommendations of the Council of Europe (1999/519)] and India, amongst others, also adopted limits below ICNIRP guidelines. International exposure limits for radio-frequency fields. |

| 2 | <b>USA</b><br>2018    | Exposure to Cell Phone and Wireless WiFi Radiation Can Reduce Impulse Control and Cause Violence. A pilot study on six California fire fighters working and sleeping in stations with towers showed symptoms including slowed reaction time, lack of focus, lack of impulse control, severe headaches, anesthesia-like sleep, sleep deprivation, depression, and tremors. Exposure can also increase acts of violence and homicide.                                                                                                                                                                                                                                                                                                                                                                                                              |
| 3 | <b>USA</b><br>2018    | Scientist Says 1 in 2 children born in 2025 will be autistic - something is clearly causing this health crisis of historic proportions. "If you take the data that the CDC has provided since 1975 and plot it, you can see that it's an exponential growth curve. You can extend the line My feeling is that things are worse than the line. So I think that 1 in 2 in 2025 is not an unreasonable prediction."                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| 4  | USA                   | Author Naomi Wolf reports EMF reactions, cloud anomalies and                                                                                                                                                                                                                                                                                       |

|     | 4 July                   | moratorium is established in Italy and 14 municipalities approve Stop 5G city council resolutions or motions. The Mayor of Marsaglia issues Italy's first Stop 5G ordinance: It "has been shown in four studies (Rea 1991, Havas 2006, 2010, McCarty et al. 2011) that it is possible to identify people with electromagnetic hypersensitivity and demonstrate that they can be tested using objective, measurable responses, demonstrating that these subjects truly are hypersensitive when compared with normal controls; that other studies show that there are true and proper physiological changes in subjects with electrosensitivity and that two studies (De Luca, Raskovic, Pacifico, Thai, Korkina 2011 and Irigaray, Caccamo, Belpomme 2018) demonstrated that electrosensitive people have high levels of oxidative stress and a prevalence of certain genetic polymorphisms, which may suggest a genetic predisposition; that the European Parliament in its 2009 Resolution and the Assembly of the Council of Europe with Resolution No. 1815 of 2011 called on member states to recognize electrosensitivity as a disability, in order to give equal opportunities to those affected". The Mayor of San Gregorio Matese bans the installation of 5G antennas on the municipal territory. |
| 90  | Switzerland              | Renowned Swiss law firm provides legal opinion stating that the                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|     | 2 July                   | Swiss Federal government's modification of its ordinance to privilege directional antennas is not legally admissible because it would undermine health protection.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 91  | Switzerland              | As a result of the above legal opinion, the Swiss Canton of Zug                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
