

“Zero Carbon”, 5G Denial and “Green Neoliberal Globalization”

By [Julian Rose](#)

Theme: [Environment](#)

In-depth Report: [Climate Change](#)

Why is it that the two words ‘Zero Carbon’ send a cool shiver down my spine? Is it the ‘zero’ or is it the ‘carbon’? Or is it particularly the combination of the two?

I wasn’t sure, until I looked-up ‘zero carbon’ within a scientific context addressing greenhouse gasses, and the answer that came back was this “If there were no greenhouse gasses the average temperature on Earth would be about -18 degrees celsius”. Now I know why the cool shiver passed down my spine.

The high profile use of this zero carbon goal, particularly via Green New Deal proponents upping the pressure on governments to follow-through their commitments to the Paris climate change treaty, carries with it the overtones of a global crusade. And the missionary zeal behind global crusades is often drummed-up by people and institutions guided by dogma rather than by conscious and humanitarian instincts for a better world.

An exploration of the roots of the ambition to achieve ‘zero carbon’ reveals a direct link to ‘climate action’/‘climate emergency’ measures promoted via Extinction Rebellion, advocates of a Green New Deal and the ‘sustainable development’ edicts of the United Nation’s Agenda 21 – now renamed Agenda 2030.

All of these ‘stop global warming’ institutions/movements are heavily backed by money derived from sources that have no record of following a transparently ‘green’ commitment within their own ethos or business practices.

Now this immediately raises the question: if the backers are not ethically in line with the supposed aims of those they are funding – could those that they are funding be influenced to adapt to the values of their backers? Might they be drawn into something quite contrary to the original ideal they set out to achieve?

Well, quite obviously the answer is yes, they could. And a quick revue of the fate of such organisations as Greenpeace and Friends of the Earth shows that this is exactly what happened.

High ambitions of the sort embraced by Greenpeace, for example, led to it becoming embroiled in ‘the art of compromise’ for the sake of rapid growth and influence.

Very soon genuine green credentials become tainted by the influence of the corporate and/or political backers, whose funds come with the proviso to adhere to certain criteria and conditions in order for further funding to be guaranteed. It’s a trap a large number of ambitious NGO’s have fallen into and never recovered from.

The truth is that leading parties in green NGO organisations focused on a prize which conformed to the standard definition of neo-liberal globalisation 'success', rather than holding true to the founding principles of the organisations they were steering.

The green movement that jumped onto the band-wagon called 'stop global warming' has, however, got an even bigger problem to deal with, one which is far more devious than the familiar 'art of compromise' that has undone so many once well intentioned movements.

This is the fact that 'the problem' it is addressing is an invention – not a reality. An invention pushed into prominence by the United Nations body called the Intergovernmental Panel on Climate Change. A body with direct links to the most powerful grouping of corporate institutions on the planet with the addition of a coterie of multi millionaires determined to set the planet's top-down 'green' agenda for the indefinite future.

An agenda that has little or nothing to do with the environment – and everything to do with the survival of the neo-liberal 'big' global economy, as admitted by Dr Otmar Edenhofer, head of Working Group 3 of the UN Intergovernmental Panel on Climate Change.

The actual causes of climactic change – and yes, it is happening – are to be found in a composite of man made and natural events, ranging from HAARP's gross interference via heating-up the ionosphere, atmospheric aerosol geoengineering (chemtrails), the residues of perpetual war, natural solar activity, the Pole shift, a weakening magnetosphere, intense electro smog and ozone depletion.

CO2 making only a tiny contribution.

Zero Carbon and the Extinction Event

The Centre for Alternative Technology (CAT) is an NGO based in West Wales. It started-out in the early 1970's as a truly innovative 'make something out of nothing' alternative energy and ecological life style community. A small group of entrepreneurs settled an old slate quarry at Machynlleth on the edge of Snowdonia, and built around themselves a community devoted to self sufficiency, especially in renewable energy, where home made wind turbines and water wheels, mostly constructed from scrap metal, powered their makeshift homes and artisan enterprises. CAT was an inspiration for many early ecological enthusiasts, many of whom (including myself) had read EF Schumacher's iconic book 'Small Is Beautiful' and wanted to put into practice the human scale wisdom expressed in its pages.

The CAT community increased throughout the 1980's and 1990's and more eco-friendly innovations were put in place that enabled the public to get their hands onto green solutions to everyday needs. Soon people came from all over the world to learn about renewable energy and the art of human scale ecologically sustainable living.

It wasn't until around 2000 that most of the original pioneers retired from active involvement in CAT's development and a new breed of entrepreneur took their place. With a focus ever more geared to education, large sums of money were raised to build a state of the art rammed earth eco-friendly education centre in which officially recognised state supported training courses were put in place that enabled budding practitioners to learn the skills necessary for a general 'greening ' of the wider environment.

As the global warming/climate change concept rose up the political agenda, so CAT became

more and more absorbed by the edicts of the CO2 obsessed IPCC. Seeing itself as a beacon of pragmatic light in a sea of theoretical dogma, CAT's new leadership sought to take the helm, declaring that the various suggested time frames for reduction in warming to be achieved by 'decarbonising' the atmosphere, were all too long and too unambitious. There was an emergency, they declared, and (initially within the context of the UK) only a 'zero carbon by 2030' end game could save the day.

This message was presented to the public, to government officials and to industry, with scientific documentation to back it up. Suddenly CAT was the centre of a hugely controversial arena, pitching its Zero Carbon message in amongst the list of demands forming the basis of various international climate treaties of which the Paris accord is the most recent.

But how many stopped to ask the question: what exactly is 'Zero Carbon'?

Do CAT and the other institutions holding high this flag want us to take it literally? Is it simply a strategic way of getting the climate change agenda speeded up? What actually is going on here?

Upon closer examination the entire package is riddled with holes. A kind of madness is built into the entire process, right from the original thesis that one variable - 'CO2' - a clear and odorless gas that constitutes just 0.0391% of the composition of the atmosphere, could, on its own, be responsible for dangerously warming the entire planet. This, even when this proportion may be rising due to the burning of fossil fuels.

Then the notion that we should all buckle down to bring this single element 'carbon dioxide' down to an even smaller percentage of global atmospheric gasses, by using carbon taxes and 'cap and trade' regulations to force less industrialised countries of the world to slow their fossil fuel dependent economies and hobble their infrastructural development. Isn't this simply the old colonial rule dressed in new clothes? And these two issues are, of course, just the tip of the iceberg. The real story behind the push to promote 'stop global warming'/'climate change' involves the fostering of a scam whose scale and deviousness has surely set a new precedent in the art of deception.

Those, like me, who deeply believe in a progressive transformation of polluting fossil fuels into decentralised human scale renewable energy solutions, are being dramatically conned; even if CAT and other environmental NGO publications suggest otherwise.

Zero Carbon is the official call we are all being told to get behind, and it is the one taken up, directly or indirectly, by Extinction Rebellion, the Greta Thunberg school of youth indoctrination, the proponents of Green New Deal and the telecoms pushing forward a blanket 5G network.

Smelling big money, politicians are happy to go along with it too. Especially since Mark Carney, director of the Bank of England, announced that any businesses that do not conform to the zero carbon 'green' criteria will be blocked from access to new loans, while those that do can expect high financial rewards. Yes, all the big multinational/transnational corporations are being invited to the table and are running to get the best seats. It's a heist.

A heist, led by 'the green movement' itself. What an irony! The supposedly anti neo-liberal

globalist movement that was supposed to point the way to a decentralised, localised and human scale form of people power, taking sound ecological practices as the foundation for a world that would finally shift 'the god of money' off its throne to be replaced by the cultivation of respect for the laws of nature and a human scale economy operating 'as if people mattered'.

When one takes a serious look at the scale of our current deviation from the path of truth, it swims before one's eyes like a virtual reality dream (nightmare). The zero carbon world we are being exalted to adapt to, when viewed through this virtual google 3D head set, reveals scenes of a fenced-off brave new world of 'rewilded' landscapes on the one hand – and sterile 5G driven 'smart cities' on the other. All of it overseen by Amazon/Google 'Cloud' powered smart grids monitoring and controlling an ever more dystopian robotic world, increasingly resembling a totalitarian prison camp.

Ray Kurzweil would surely feel quite at home with the ushering-in of such artificial intelligence led systems finally achieving their place as the 'new brain'; having successfully usurped the human one.

Zero Carbon suggests to me that the cyborg 5G smart city is the Agenda 2030 'sustainable development' carbon free omega point towards which we are all being ushered at brake-neck speed. With Caroline Lucas, Greta Thunberg, Gail Bradbrook, Yanis Verufakis and others leading 'the rebellion' while holding high the flag of a Green-Fascist New World Order.

Eco-fascism has arrived on our doorstep and its appeal has become almost irresistible to those who combine a hyped-up fear of 'the end of the world' with belief in the rhetoric of bought-out climatologists, ambitious fake green con men (and women) and the political figurehead puppets of the deep state.

Zero carbon has taken the lead as 'the solution' to an anthropogenic global warming invention whose alarmist climate rhetoric was cunningly dreamed-up by the Club of Rome some thirty five years ago, as the perfect means of controlling the people as well as the essential political agenda of planetary life, both economic and social. By cleverly giving carbon the lead role in an extinction narrative – in which it is caste as the chief villain – the perpetrators of the myth (United Nations plc) have grabbed the headlines – insisting that this harmless, essential component of nature (CO2) is the all-time baddie that must now be reduced to zero in order to save the planet. The Putin of the biosphere.

The sheer audacity of this lie is breathtaking. Think about it.. reduce nature's natural capital, carbon dioxide, to zero and what do you have? An extinction event. The very 'event' that Extinction Rebellion is, on behalf of the United Nation's Agenda 2030, blocking the streets of London, New York, Berlin et al. to demand action against. Thereby supporting a bunch of crooks, well versed in the art of deception, to enforce their master plan for absolute control combined with a significant reduction in the world population. "Carbon must be eliminated – therefore get rid of non carbon neutral humans."

The unknowing would never associate fascism with environmentalism, would they. They would never guess that a fake green agenda could be the Trojan horse for for the final take-over. Yet the fascist take-over that failed under Hitler and Mussolini, has crept steadily and stealthily forward under the dictatorship of the giant banking fiefdoms of the past half century – and it is precisely these institutions that are now falling in line to back a Green

New Deal.

Green is the colour chosen for the final great deception and that which trees and plants convert into oxygen has been cast as the 'demiurge' which heroic styled NGO's are riding out to do battle with. A battle to the death, no less.

We will not all be fooled all the time, even if a majority maintain an eyes wide shut disposition to the roll-out of such a toxic agenda. The wake-up is gathering momentum at an ever accelerating rate. An instinctual resistance to the 5G microwave crowd control weapon, coupled with a plethora of reports on its egregious health affects, is acting as a powerful vector to unite people across the globe, causing all of us to recognise that this is not just about one exceptionally cruel form of eco-genocide, but the pinnacling of an underlying fear – by humanity's oppressors – of that which stands behind love, beauty, compassion and joy. Fear that takes the form of an aggressive suppression of these primary life instincts.

As the eminent social psychiatrist Dr Erich Fromm stated, it is The Fear of Freedom that we are witnessing in the diabolic attempts to shut-down the energetic evolution of the universal life force itself.

The tables are turning. The greater the downward pressure to conform to a dead-end, slavish and robotic existence, the greater the innate inner power of opposition rises up in resistance – in those who let it. A resistance sparked by outrage – and a defiant determination to act in defence of Life.

Onward, onward, dear friends, in the midst of the darkness more and more light is shining through!
